

Michael R. Groh

# Microsoft® Access® 2010

**Create** tables and design  
bulletproof databases

**Integrate** Access with  
other applications

**Organize**, view, analyze,  
and share data

# Bible

**The book you need to succeed!**

# Access<sup>®</sup> 2010 Bible

## Table of Contents

### [Part I: Access Building Blocks](#)

#### [Chapter 1: An Introduction to Database Development](#)

##### [The Database Terminology of Access](#)

###### [Databases](#)

###### [Tables](#)

###### [Records and fields](#)

###### [Values](#)

##### [Relational Databases](#)

##### [Access Database Objects](#)

###### [Datasheets](#)

###### [Queries](#)

###### [Data-entry and display forms](#)

###### [Reports](#)

###### [Database objects](#)

##### [A Five-Step Design Method](#)

###### [Step 1: The overall design — from concept to reality](#)

###### [Step 2: Report design](#)

###### [Step 3: Data design](#)

###### [Step 4: Table design](#)

###### [Step 5: Form design](#)

[Summary](#)

## [Chapter 2: Creating Access Tables](#)

[Getting Started with Access](#)

[The Templates section](#)

[The Office Backstage View](#)

[Creating a Database](#)

[The Access 2010 Environment](#)

[The Navigation Pane](#)

[The ribbon](#)

[Other relevant features of the Access environment](#)

[Creating a New Table](#)

[Designing tables](#)

[Using the Design tab](#)

[Working with fields](#)

[Creating tblCustomers](#)

[Using AutoNumber fields](#)

[Completing tblCustomers](#)

[Changing a Table Design](#)

[Inserting a new field](#)

[Deleting a field](#)

[Changing a field location](#)

[Changing a field name](#)

[Changing a field size](#)

[Handling data conversion issues](#)

[Assigning field properties](#)

[Understanding tblCustomers Field Properties](#)

[Setting the Primary Key](#)

[Choosing a primary key](#)

[Creating the primary key](#)

[Creating composite primary keys](#)

[Indexing Access Tables](#)

[The importance of indexes](#)

[Multiple-field indexes](#)

[When to index tables](#)

[Printing a Table Design](#)

[Saving the Completed Table](#)

[Manipulating Tables](#)

[Renaming tables](#)

[Deleting tables](#)

[Copying tables in a database](#)

[Copying a table to another database](#)

[Adding Records to a Database Table](#)

[Understanding Attachment Fields](#)

[Summary](#)

## [Chapter 3: Designing Bulletproof Databases](#)

[Building Bulletproof Databases](#)

[Data Normalization](#)

[First normal form](#)

[Second normal form](#)

[Third normal form](#)

[Denormalization](#)

[Table Relationships](#)

[Connecting the data](#)

[One-to-one](#)

[One-to-many](#)

[Many-to-many](#)

[Integrity Rules](#)

[No primary key can contain a null value](#)

[All foreign key values must be matched by corresponding primary keys](#)

[Keys](#)

[Deciding on a primary key](#)

[The benefits of a primary key](#)

[Designating a primary key](#)

[Creating relationships and enforcing referential integrity](#)

[Viewing all relationships](#)

[Deleting relationships](#)

[Application-specific integrity rules](#)

[Summary](#)

## [Chapter 4: Selecting Data with Queries](#)

[Introducing Queries](#)

[What queries are](#)

[Types of queries](#)

[What queries can do](#)

[What queries return](#)

[Creating a Query](#)

[Adding Fields](#)

[Adding a single field](#)

[Adding multiple fields](#)

[Displaying the Recordset](#)

[Working with Fields](#)

[Selecting a field in the QBE grid](#)

[Changing field order](#)

[Resizing columns in the QBE grid](#)

[Removing a field](#)

[Inserting a field](#)

[Providing an alias for the field name](#)

[Showing a field](#)

[Changing the Sort Order](#)

[Displaying Only Selected Records](#)

[Understanding selection criteria](#)

[Entering simple string criteria](#)

[Entering other simple criteria](#)

[Printing a Query's Recordset](#)

[Saving a Query](#)

[Creating Multi-Table Queries](#)

[Viewing table names](#)

[Adding multiple fields](#)

[Multi-table query limitations](#)

[Overcoming query limitations](#)

[Working with the Table Pane](#)

[Looking at the join line](#)

[Manipulating Field Lists](#)

[Moving a table](#)

[Removing a table](#)

[Adding more tables](#)

[Creating and Working with Query Joins](#)

[Using ad hoc table joins](#)

[Specifying the type of join](#)

[Deleting joins](#)

[Understanding Table Join Types](#)

[Working with inner joins \(equi-joins\)](#)

[Understanding outer joins](#)

[Working with self-joins](#)

[Creating a Cartesian product](#)

[Summary](#)

## [Chapter 5: Using Operators and Expressions in Access](#)

[Introducing Operators](#)

[Looking at the types of operators](#)

[Operator precedence](#)

[Using Operators and Expressions in Queries](#)

[Using query comparison operators](#)

[Understanding complex criteria](#)

[Using functions in select queries](#)

[Referencing fields in select queries](#)

[Entering Single-Value Field Criteria](#)

[Entering character \(Text or Memo\) criteria](#)

[The Like operator and wildcards](#)

[Specifying non-matching values](#)

[Entering numeric criteria](#)

[Entering true or false criteria](#)

[Entering OLE object criteria](#)

[Using Multiple Criteria in a Query](#)

[Understanding an Or operation](#)

[Specifying multiple values with the Or operator](#)

[Using the Or cell of the QBE pane](#)

[Using a list of values with the In operator](#)

[Using And to specify a range](#)

[Using the Between...And operator](#)

[Searching for Null data](#)

[Entering Criteria in Multiple Fields](#)

[Using And and Or across fields in a query](#)

[Specifying Or criteria across fields of a query](#)

[Using And and Or together in different fields](#)

[A complex query on different lines](#)

[Summary](#)

## [Chapter 6: Working with Datasheet View](#)

[Understanding Datasheets](#)

[Looking at the Datasheet Window](#)

[Moving within a datasheet](#)

[Using the Navigation buttons](#)

[Examining the Datasheet ribbon](#)

[Opening a Datasheet](#)

[Entering New Data](#)

[Saving the record](#)

[Understanding automatic data-type validation](#)

[Knowing how properties affect data entry](#)

## [Navigating Records in a Datasheet](#)

[Moving between records](#)

[Finding a specific value](#)

## [Changing Values in a Datasheet](#)

[Manually replacing an existing value](#)

[Changing an existing value](#)

## [Using the Undo Feature](#)

## [Copying and Pasting Values](#)

## [Replacing Values](#)

## [Adding New Records](#)

## [Deleting Records](#)

## [Displaying Records](#)

[Changing the field order](#)

[Changing the field display width](#)

[Changing the record display height](#)

[Changing display fonts](#)

[Displaying cell gridlines and alternate row colors](#)

[Aligning data in columns](#)

[Hiding and unhiding columns](#)

[Freezing columns](#)

[Saving the changed layout](#)

[Saving a record](#)

## [Sorting and Filtering Records in a Datasheet](#)

[Sorting your records with QuickSort](#)

[Filtering a selection](#)

[Filtering by form](#)

[Focusing on Special Features of Datasheets](#)

[Printing Records](#)

[Printing the datasheet](#)

[Using the Print Preview window](#)

[Summary](#)

## [Chapter 7: Creating Basic Access Forms](#)

[Formulating Forms](#)

[Creating a new form](#)

[Looking at special types of forms](#)

[Resizing the form area](#)

[Saving your form](#)

[Working with Controls](#)

[Categorizing controls](#)

[Adding a control](#)

[Selecting and deselecting controls](#)

[Manipulating controls](#)

[Introducing Properties](#)

[Displaying the Property Sheet](#)

[Getting acquainted with the Property Sheet](#)

[Changing a control's property setting](#)

[Naming control labels and their captions](#)

[Summary](#)

## [Chapter 8: Working with Data on Access Forms](#)

[Using Form View](#)

[Looking at the Home ribbon tab](#)

[Navigating among fields](#)

[Moving among records in a form](#)

[Changing Values in a Form](#)

[Knowing which controls you can't edit](#)

[Working with pictures and OLE objects](#)

[Entering data in the Memo field](#)

[Entering data in the Date field](#)

[Using option groups](#)

[Using combo boxes and list boxes](#)

[Switching to Datasheet view](#)

[Saving a record](#)

[Printing a Form](#)

[Working with Form Properties](#)

[Changing the title bar text with the Caption property](#)

[Creating a bound form](#)

[Specifying how to view the form](#)

[Removing the Record Selector](#)

[Looking at other form properties](#)

[Adding a Form Header or Footer](#)

[Changing the Layout](#)

[Changing a control's properties](#)

[Setting the Tab Order](#)

[Aligning controls](#)

[Modifying the format of text in a control](#)

[Using the Field List to add controls](#)

[Creating a Calculated Control](#)

[Converting a Form to a Report](#)

[Summary](#)

## [Chapter 9: Presenting Data with Access Reports](#)

[Introducing Reports](#)

[Identifying the different types of reports](#)

[Distinguishing between reports and forms](#)

[Creating a Report, from Beginning to End](#)

[Defining the report layout](#)

[Assembling the data](#)

[Creating a report with the Report Wizard](#)

[Printing or viewing the report](#)

[Saving the report](#)

[Banded Report Design Concepts](#)

[The Report Header section](#)

[The Page Header section](#)

[The Group Header section](#)

[The Detail section](#)

[The Group Footer section](#)

[The Page Footer section](#)

[The Report Footer section](#)

[Creating a Report from Scratch](#)

[Creating a new report and binding it to a query](#)

[Defining the report page size and layout](#)

[Placing controls on the report](#)

[Resizing a section](#)

[Working with text boxes](#)

- [Changing label and text-box control properties](#)
- [Growing and shrinking text-box controls](#)
- [Sorting and grouping data](#)
- [Sorting data within groups](#)
- [Adding page breaks](#)
- [Improving the Report's Appearance](#)
  - [Adjusting the page header](#)
  - [Creating an expression in the group header](#)
  - [Enhancing the Detail section](#)
  - [Creating a report header](#)
- [Summary](#)

## [Part II: Programming Microsoft Access](#)

### [Chapter 10: VBA Programming Fundamentals](#)

- [Introducing Visual Basic for Applications](#)
- [Understanding VBA Terminology](#)
- [Starting with VBA Code Basics](#)
- [Migrating from Macros to VBA](#)
  - [Knowing when to use macros and when to use VBA](#)
  - [Converting your existing macros to VBA](#)
  - [Using the Command Button Wizard](#)
- [Creating VBA Programs](#)
  - [Events and event procedures](#)
  - [Modules](#)
- [Understanding VBA Branching Constructs](#)
  - [Branching](#)

[Looping](#)

[Working with Objects and Collections](#)

[An object primer](#)

[The With statement](#)

[The For Each statement](#)

[Looking at Access Options for Developers](#)

[The Editor tab of the Options dialog box](#)

[The Project Properties dialog box](#)

[Command-line arguments](#)

[Summary](#)

## [Chapter 11: Mastering VBA Data Types and Procedures](#)

[Introducing the Access VBA Editor](#)

[Using Variables](#)

[Naming variables](#)

[Declaring variables](#)

[Working with Data Types](#)

[Comparing implicit and explicit variables](#)

[Forcing explicit declaration](#)

[Using a naming convention](#)

[Understanding variable scope and lifetime](#)

[Understanding Subs and Functions](#)

[Understanding where to create a procedure](#)

[Calling VBA procedures](#)

[Creating subs](#)

[Creating Functions](#)

[Handling parameters](#)

[Calling a function and passing parameters](#)  
[Creating a function to calculate sales tax](#)  
[Simplifying Code with Named Arguments](#)  
[Summary](#)

## [Chapter 12: The Access Event Model](#)

[Programming Events](#)

[Understanding how events trigger VBA code](#)  
[Creating event procedures](#)

[Identifying Common Events](#)

[Form event procedures](#)  
[Control event procedures](#)  
[Report event procedures](#)  
[Report section event procedures](#)

[Paying Attention to Event Sequence](#)

[Looking at common event sequences](#)  
[Writing simple form and control event procedures](#)

[Summary](#)

## [Chapter 13: Accessing Data with VBA Code](#)

[Understanding SQL](#)

[Viewing SQL statements in queries](#)  
[A SQL primer](#)

[Working with Data](#)

[Understanding ADO Objects](#)

[The ADO Connection object](#)  
[The ADO Command object](#)

[The ADO Recordset object](#)

## [Understanding DAO Objects](#)

[The DAO DBEngine object](#)

[The DAO Workspace object](#)

[The DAO Database object](#)

[The DAO TableDef object](#)

[The DAO QueryDef object](#)

[The DAO Recordset object](#)

[The DAO Field objects \(recordsets\)](#)

## [Writing VBA Code to Update a Table](#)

[Updating fields in a record using ADO](#)

[Updating a calculated control](#)

[Adding a new record](#)

[Deleting a record](#)

[Deleting related records in multiple tables](#)

## [Summary](#)

# [Chapter 14: Debugging Your Access Applications](#)

## [Testing Your Applications](#)

## [Using the Module Options](#)

[Auto Syntax Check](#)

[Require Variable Declaration](#)

[Auto List Members](#)

[Auto Quick Info](#)

[Auto Data Tips](#)

[Break on All Errors](#)

[Compile on Demand](#)

[Organizing VBA Code](#)

[Compiling VBA Code](#)

[Traditional Debugging Techniques](#)

[Using MsgBox](#)

[Using Debug.Print](#)

[Using the Access Debugging Tools](#)

[Running code with the Immediate window](#)

[Suspending execution with breakpoints](#)

[Looking at variables with the Locals window](#)

[Setting watches with the Watches window](#)

[Using conditional watches](#)

[Using the Call Stack window](#)

[Summary](#)

## [Chapter 15: Using Access Data Macros](#)

[Introducing Data Macros](#)

[Looking at How Data Macros Are Created](#)

[Using the Macro Designer](#)

[Using the Action Catalog](#)

[Discovering Table Events](#)

[Before events](#)

[After events](#)

[Building Macros](#)

[Adding macro items](#)

[Manipulating macro items](#)

[Moving macro items](#)

[Collapsing macro items](#)

[Saving a macro as XML](#)  
[Recognizing the Limitations of Data Macros](#)  
[Summary](#)

## [Part III: More-Advanced Access Techniques](#)

### [Chapter 16: Working with External Data](#)

[Looking at How Access Works with External Data](#)

[Types of external data](#)  
[Ways of working with external data](#)  
[Linking External Data](#)

[Linking to external database tables](#)  
[Limitations of linked data](#)  
[Linking to other Access database tables](#)  
[Linking to ODBC data sources](#)  
[Linking to xBase files](#)  
[Linking to non-database data](#)

[Working with Linked Tables](#)

[Setting view properties](#)  
[Setting relationships](#)  
[Optimizing linked tables](#)  
[Deleting a linked table reference](#)  
[Viewing or changing information for linked tables](#)

[Using Code to Link Tables in Access](#)

[The Connect and SourceTableName properties](#)  
[Checking links](#)

[Summary](#)

## Chapter 17: Importing and Exporting Data

Looking at Your Options for Importing and Exporting

Importing External Data

Importing from another Access database

Importing from an Excel spreadsheet

Importing a SharePoint list

Importing data from text files

Importing an XML document

Importing an HTML document

Importing Access objects other than tables

Importing an Outlook folder

Importing dBase tables

Troubleshooting import errors

Exporting to External Formats

Exporting objects to other Access databases

Exporting through ODBC drivers

Functionality exclusive to exports

Summary

## Chapter 18: Advanced Access Query Techniques

Using Calculated Fields

Calculated Fields and the Expression Builder

Counting Records in a Table or Query

Finding the Top (n) Records in a Query

How Queries Save Field Selections

Hiding (not showing) fields

- [Renaming fields in queries](#)
- [Query Design Options](#)
- [Setting Query Properties](#)
- [Creating Queries That Calculate Totals](#)
  - [Showing and hiding the Total row in the QBE pane](#)
  - [The Total row options](#)
  - [Performing totals on all records](#)
  - [Performing totals on groups of records](#)
  - [Specifying criteria for a total query](#)
  - [Creating expressions for totals](#)
- [Creating Crosstab Queries](#)
  - [Understanding the crosstab query](#)
  - [Creating the crosstab query](#)
- [Understanding Action Queries](#)
  - [Types of action queries](#)
  - [Creating action queries](#)
  - [Troubleshooting action queries](#)
- [Summary](#)

## [Chapter 19: Advanced Access Form Techniques](#)

- [Setting Control Properties](#)
  - [Customizing default properties](#)
  - [Manipulating controls at runtime](#)
  - [Reading control properties](#)
- [Working with Subforms](#)
- [Designing Forms](#)
  - [Using the Tab Stop property](#)

[Tallying check boxes](#)

[Adding animation](#)

[Using SQL for a faster refresh](#)

[Selecting data for overtyping](#)

[Toggling properties with Not](#)

[Creating an auto-closing form](#)

[Setting up combo boxes and list boxes](#)

[Determining whether a form is open](#)

### [Tackling Advanced Forms Techniques](#)

[Using the Page Number and Date/Time controls](#)

[Using the Image control](#)

[Morphing a control](#)

[Using the Format Painter](#)

[Offering more end-user help](#)

[Adding background pictures](#)

[Fine-tuning your form's behavior with form events](#)

### [Using the Tab Control](#)

### [Using Dialog Boxes to Collect Information](#)

[Composing the SQL statement](#)

[Adding a default button](#)

[Setting a Cancel button](#)

[Removing the control menu](#)

[Closing the form](#)

### [Summary](#)

## [Chapter 20: Advanced Access Report Techniques](#)

### [Grouping and Sorting Data](#)

[Grouping data alphabetically](#)

[Grouping on date intervals](#)

[Hiding repeating information](#)

[Hiding a page header](#)

[Starting a new page number for each group](#)

## [Formatting Data](#)

[Creating numbered lists](#)

[Adding bullet characters](#)

[Adding emphasis at runtime](#)

[Avoiding empty reports](#)

[Avoiding null values in a tabular report](#)

[Inserting vertical lines between columns](#)

[Adding a blank line every n records](#)

[Even-odd page printing](#)

[Using different formats in the same text box](#)

[Centering the title](#)

[Easily aligning control labels](#)

[Micro-adjusting controls](#)

## [Adding Data](#)

[Adding more information to a report](#)

[Adding the user's name to a bound report](#)

## [Trying More Techniques](#)

[Displaying all reports in a combo box](#)

[Fast printing from queried data](#)

[Hiding forms during Print Preview](#)

[Using snaking columns in a report](#)

[Exploiting two-pass report processing](#)

[Assigning unique names to controls](#)

[Summary](#)

## [Chapter 21: Building Multiuser Applications](#)

[Working on a Network](#)

[Network performance](#)

[File location](#)

[Data sources](#)

[Considering the Options for Opening a Database](#)

[Splitting a Database for Network Access](#)

[Detailing the benefits of splitting a database](#)

[Knowing where to put which objects](#)

[Using the Database Splitter add-in](#)

[Finding the Key to Locking Issues](#)

[Access's built-in record-locking features](#)

[Record-lock error handling](#)

[Reducing Multiuser Errors with Unbound Forms](#)

[Creating an unbound form](#)

[Making an unbound form work](#)

[Summary](#)

## [Chapter 22: Integrating Access with Other Applications](#)

[Using Automation in Access](#)

[Understanding how Automation works](#)

[Creating Automation references](#)

[Binding your VBA object variables to objects in the Automation interface](#)

- [Creating an instance of an Automation object](#)
- [Getting an existing object instance](#)
- [Working with Automation objects](#)
- [Closing an instance of an Automation object](#)
- [Looking at an Automation Example Using Word](#)
  - [Creating an instance of a Word object](#)
  - [Making the instance of Word visible](#)
  - [Creating a new document based on an existing template](#)
  - [Inserting data](#)
  - [Activating the instance of Word](#)
  - [Moving the cursor in Word](#)
  - [Discarding the Word object instance](#)
  - [Inserting pictures by using bookmarks](#)
  - [Using Office's macro recorder](#)
- [Collecting Data with Microsoft Outlook](#)
  - [Creating an e-mail](#)
  - [Managing replies](#)
- [Summary](#)

## [Chapter 23: Handling Errors and Exceptions](#)

- [Dealing with Errors](#)
  - [Logical errors](#)
  - [Runtime errors](#)
- [Identifying Which Errors Can Be Detected](#)
  - [What an error handler is](#)
  - [How to set a basic error trap](#)
- [Trapping Errors with VBA](#)

[The Err object](#)

[VBA error-handling statements](#)

[The Error event](#)

[The ADO Errors collection](#)

[Summary](#)

## [Part IV: Professional Database Development](#)

### [Chapter 24: Optimizing Access Applications](#)

[Understanding Module Load on Demand](#)

[Organizing your modules](#)

[Pruning the call tree](#)

[Using the .accdb Database File Format](#)

[Distributing .accde Files](#)

[Understanding the Compiled State](#)

[Putting your application's code into a compiled state](#)

[Losing the compiled state](#)

[Distributing applications in a compiled or uncompiled state](#)

[Improving Absolute Speed](#)

[Tuning your system](#)

[Getting the most from your tables](#)

[Getting the most from your queries](#)

[Getting the most from your forms and reports](#)

[Getting the most from your modules](#)

[Increasing network performance](#)

[Improving Perceived Speed](#)

[Using a splash screen](#)

[Loading and keeping forms hidden](#)

[Using the hourglass](#)

[Using the built-in progress meter](#)

[Creating a progress meter as a pop-up form](#)

[Speeding up the progress meter display](#)

[Working with Large Access Databases](#)

[Understanding how databases grow in size](#)

[Recognizing that compiling and compacting may not be enough](#)

[Using the decompile option](#)

[Detecting an uncompiled database and automatically recompiling](#)

[Making small changes to large databases](#)

[Summary](#)

## [Chapter 25: Advanced Data Access with VBA](#)

[Adding an Unbound Combo Box to a Form to Find Data](#)

[Using the FindRecord method](#)

[Using a bookmark](#)

[Filtering a Form](#)

[With code](#)

[With a query](#)

[Summary](#)

## [Chapter 26: Bulletproofing Access Applications](#)

[Introducing Bulletproofing](#)

[Looking at the Characteristics of Bulletproofed Applications](#)

[Identifying the Principles of Bulletproofing](#)

[Building to a specification](#)

[Becoming one with documentation](#)

[Considering your users](#)

[Getting the application to the users](#)

[Enabling the users to actually use the application](#)

[Controlling the flow of information](#)

[Keeping the user informed](#)

[Tracking down problems](#)

[Securing the environment](#)

[Protecting your database](#)

[Continuing to improve the product](#)

[Summary](#)

## [Chapter 27: Using the Windows Application Programming Interface](#)

[What the Windows API Is](#)

[Reasons to Use the Windows API](#)

[Common code base](#)

[Tested and proven code](#)

[Cross-platform compatibility](#)

[Smaller application footprint](#)

[Application consistency](#)

[DLL Documentation](#)

[Finding the documentation](#)

[Making sense of the documentation](#)

[Recognizing what you can't do with the API](#)

[How to Use the Windows API](#)

[The Declare statement](#)

[Wrapper functions](#)

[API Examples](#)

[Retrieving system information](#)

[Going over general-purpose Windows API functions](#)

[Manipulating application settings with the Windows API](#)

[Summary](#)

## [Chapter 28: Object-Oriented Programming with VBA](#)

[Introducing Object-Oriented Programming](#)

[Getting to know objects](#)

[Defining objects with class modules](#)

[Looking at a simple class module](#)

[Adding a class module to a database](#)

[Creating simple product properties](#)

[Creating methods](#)

[Using the product object](#)

[Creating bulletproof property procedures](#)

[Recognizing the Benefits of Object-Oriented Programming](#)

[Encapsulating functionality](#)

[Simplifying programming tasks](#)

[Managing a class's interface](#)

[Using Property Procedures](#)

[Looking at the types of property procedures](#)

[Exploring property-value persistence](#)

[Heeding property procedure rules](#)

[Modifying the Product Class](#)

[Retrieving product details](#)

[Looking at the new ProductID property](#)

[Adding a new property to provide extra information](#)

[Adding a new method to the product class](#)

[Learning about Class Events](#)

[The Class\\_Initialize event procedure](#)

[The Class\\_Terminate event procedure](#)

[Adding Events to Class Modules](#)

[Learning about events in Access](#)

[Recognizing the need for events](#)

[Creating custom events](#)

[Raising events](#)

[Trapping custom events](#)

[Passing data through events](#)

[Exploiting Access class module events](#)

[Summary](#)

## [Chapter 29: Customizing Access Ribbons](#)

[Why Replace Toolbars and Menus?](#)

[New controls for Access ribbons](#)

[SplitButton](#)

[DropDown](#)

[Gallery](#)

[SuperTips](#)

[Working with the Access Ribbon](#)

[Tabs](#)

[Groups](#)

[Controls](#)

- [Managing the ribbon](#)
- [Working with the Quick Access Toolbar](#)
- [Editing the Default Access Ribbon](#)
- [Developing Custom Access Ribbons](#)
  - [The ribbon creation process](#)
  - [Using VBA callbacks](#)
- [The Ribbon Hierarchy](#)
- [Getting Started with Access Ribbons](#)
  - [Step 1: Design the ribbon and build the XML](#)
  - [Step 2: Write the callback routines](#)
  - [Step 3: Create the USysRibbons table](#)
  - [Step 4: Add XML to USysRibbons](#)
  - [Step 5: Specify the custom ribbon property](#)
- [The Basic Ribbon XML](#)
- [Adding Ribbon Controls](#)
  - [Specifying imageMso](#)
  - [The Label control](#)
  - [The Button control](#)
  - [Separators](#)
  - [Check boxes](#)
  - [The DropDown control](#)
  - [The SplitButton Control](#)
- [Using Visual Web Developer](#)
- [Managing Ribbons](#)
- [Completely Removing the Access Ribbon](#)
- [Summary](#)
